

PROTECTION AGAINST BOILER CORROSION AND FOULING

Accessories for REGOMAT Load Units

BP REGOMAT

By-pass with floating non-return valve

Regomat load units can be amended with a by-pass with a floating non-return valve.

In case of a power failure or a broken circulation pump the boiler will cool down into the thermal store via gravity circulation through the by-pass with non-return valve.

Versions

Name			Code
By-pass with a non-return valve for Regomat with 1" connection			16 126
By-pass with a non-return valve for Regomat with 5/4" connection			16 139

Connection in a system
